OPERA
EVOLUTION

The latest and most advanced evolution of OPERA systems, best-seller among remote-controlled tables

NEW ELEVATION SYSTEM: thanks to the new elevation system that reduces the distance from the floor, accessibility for the patient is facilitated, ensuring easy and safe access even to elderly patients or patients with reduced mobility

INTEGRATED INTERFACE: generator control, table positioning and image processing in a single monitor

FAST: infinite number of auto positions of the table manageable by anatomical programs to reduce the time of examination and manual interventions of operators

ERGONOMIC: new touch screen display on the collimator for control of table movements

RELIABLE: high image quality with minimal dose

MODERN: wide focal distance adjustable with a smooth and silent movement

RESISTANT: high weight capacity for examinations for obese patients
